

# Email Survey---Priorities from states

- Cross-cutting
  - Provider data (NPIs and name scrubbing)
  - Data comparisons post ICD-10 transition
  - Data reliability/reproducibility across different data sources
  - Patient Identifier (impact of CMS SSNRI for Medicare)
  - Quality control strategies and how those vary by project (i.e. cost versus quality) and across states (benchmarking comment)
- Hospital Discharge Data
  - Payer Typology-promoting other states' use of it and creating support for inclusion in the 837
  - how to identify inpatient rehab visits post ICD-10
  - how to identify ED visits and especially ones occurring in a critical access hospital
- APCD Data
  - Evaluating commercial data pre vs post Gobeille ruling
  - % of enrollees with missing pharmacy data (mainly self-insured)
  - Duplicate claims which has to do with versioning, changing claims ID, and full reversals.
  - Reviewing data quality of some of the more unique data in APCDs which aren't universally collected. E.g., dental claims, encounter claims, Medicare data, etc.
