Development of the APCD Common Data Layout (APCD-CDL™) was a collaborative effort of the APCD Council Leadership Team, individuals representing states' APCDs, APCD programs, APCD contractors and vendors, and data submitters.

The California Department of Health Care Access and Information (HCAI) and Freedman HealthCare developed the Expanded Non-Claims Payment Framework (or Expanded Framework) in consultation with Bailit Health, the author of a Millbank Memorial Fund paper categorizing non-claims-based primary care spending.^{1,2} This guidance adds to the Expanded Framework two values for capturing the fee-for-service payments and the member count.

Introduction

Overview

All-Payer Claims Databases (APCDs) are large-scale databases that systematically collect healthcare claimpayment data from the existing transaction-systems created to payreimburse healthcare claims. APCDsproviders. They typically include data derived from medical, pharmacy, and dental claims, other non-claims payments, member eligibility files, and provider (physician and facility) files from private and public payers. APCDs are often created by a state mandate and APCDs exist as statewide, comprehensive databases managed by ana state agency of state government or its designee. APCDs canare also be-created atvoluntarily for a regionalregion or sub-specific stakeholders within a state-level, usually by nonprofit organizations such as healthcare-related employer business groups or community coalition organizations. APCDs are used by state agencies, employers, provider, consumers, health plans and other researchers for many purposes including, but not limited to:

State agencies, employers, providers, consumers, health plans, and other researchers use APCDs for many purposes including, but not limited to:

- Examining healthcare cost, utilization, quality, and outcomes,
- Promoting transparency of healthcare costs,
- Evaluating value-based purchasing,
- Designing wellness programs, and
- Trending and benchmarking.

APCDs are designed with these use cases in mind.

These use cases inform APCD design. Most are structured to create a single de-identified person identifier across payers to create a longitudinal record of services rendered and all provider reimbursements without duplication.

Purpose

The purpose of the APCD-Common Data Layout (APCD-CDL™) for All-Payer Claims Databases (APCD-CDL™) and its Non-Claims Payment (NCP) Data Layout is to harmonize the healthcare payments and member eligibility data collection efforts across APCDs and reduce the burden of submission. The overall goals of this effort are states. This unified framework aims to improve efficiency, reduce administrative costs, and improve the accuracy inand efficiency of claims-based and non-claims payment data collection.

State APCD programs determine submission requirements, such as the scope of plans required to submit and which files are required, member inclusion criteria, submission frequency, and due dates, including how much run-out will be allowed and whether to refresh previous years' data.

Technical Specifications

~~DATA SUBMISSION REQUIREMENTS~~

File Content

~~Files in this layout include~~Each file contains individual data elements, data types, field lengths, and field description/code assignments,~~and references to industry standards. for collecting claims-based and non-claims payment data from healthcare payers.~~ The submission of the medical, pharmacy, and dental claim-~~data~~ is based upon the adjudication date within a given reporting period. All files shall be submitted as separate pipe-delimited files with variable field lengths. Elements with no data should be reported as two pipes together, with no spaces or tab characters padding the field.

~~The~~

Variations from any file layout can cause data processing delays and errors, requiring additional resources to bring non-compliant submissions into the APCD-GDL™. Therefore, exceptions should only be granted when data submitter compliance is unfeasible. Programs typically only give exceptions for the shortest time possible.

This guidance is intentionally silent on establishing 1) definitions for “primary care” and “behavioral health” and 2) data quality thresholds to allow APCD programs flexibility during testing and implementation. Aspects of data quality (e.g., accuracy, completeness, consistency, relevance, timeliness, uniqueness, validity)Both will vary across state-designated agencies due to differences in law, rule, policy and technical capability. Data differences. Care definitions and data quality can also varies vary by data supplier within a state. For this reason, APCD programs typically set data quality thresholds are usually established based on submission testing, expectations setsetting with data suppliers, and in consultation with other state agencies collecting these data. Exceptions to data quality thresholds might be negotiated and adjusted over time to improve data quality in compliance with the rules of a state or agency submission requirements.

Consistent ~~Inter-file Identifier~~Identifiers

~~The files in this layout are intended to be relational. Therefore, it is critical to provide a~~Providing consistent person identifier member, provider, and plan identifiers across all files for any members, providers, and plans is critical. A health care claims processor data submitter and any contracted entity acting on their behalf of a carrier shall ensure that member, subscriber,

~~provider, and plan~~ identifiers for the same individuals are unique and consistent across ~~medical claims, pharmacy claims, dental claims and~~ member eligibility and payment files.

~~CONSIDERATION FOR SPECIFIC DATA FILES~~

~~Considerations for adjustment records and financial amounts potentially apply to all claim types:~~

~~Adjustment Records~~

~~The APCD CDL™ includes elements that allow post-adjudication claims data to be adjusted, corrected, and replaced. Business rules vary across payers for adjusting, correcting, and replacing claims and assigning claim and version numbers. Given the expected variation, the APCD CDL™ remains agnostic on a specific method for claim versioning.~~

~~Financial Amounts~~

~~Financial amount data elements assume the following:~~

- ~~- The amount paid for each payment record is mutually exclusive.~~
- ~~- The sum of all claim lines for a given claim will equal the total dollar amount of the following financial amount data elements: Charge Amount, Withhold Amount, Plan Paid Amount, Co-Pay Amount, Coinsurance Amount, Deductible Amount, Other Insurance Paid Amount, COB/TPL Amount, and Allowed Amount (elements may differ among the claim.~~
- ~~• For claims-based payment records (i.e., medical, pharmacy, and dental claims files), use an implied decimal when reporting dollar amounts (e.g., \$1,000.25 = 100025).~~
- ~~• Mutually exclusive For non-charge financial amounts claims payment records (i.e., withhold, plan paid, co-pay, coinsurance, deductible, other insurance paid, COB/TPL annual, pharmacy rebates, and allowed).~~

~~Member as Subscriber~~

- ~~- There is a one capitation), round or truncate to one relationship between subscriber and member for Medicare and Medicaid plans, meaning the member is always the subscriber. In all instances where the member is the subscriber, regardless of carrier or plan type, include the subscriber information in the member data element. nearest dollar and report as an integer (e.g., \$1,000.25 = 1000).~~

~~FILE TYPES~~

A1. Header and Trailer Records

Each file submissions must contain a header and trailer records. The header record is the first row of each file submitted and the trailer record is the last separate file submission.

Member Eligibility File (ME)

A member eligibility file is composed of demographic and plan data for each member enrolled for medical, pharmacy, or dental benefits coverage for one or more days during the reporting period. Data suppliers must provide records for all members, regardless of whether a member utilized services during the reporting period. One record, per member, per month, per plan, is required. For example, if a member is covered as both a subscriber and a dependent on two different policies during the same month, two records must be submitted. If a member has two contract numbers for two different coverage types, two member eligibility records must be submitted. References to the Accredited Standards Committee (ASC) X12N 270/271 implementation guides are provided in the tables below.

Medical Claims File (MC)

A medical claims file is a data file composed of service-level claim and remittance information, including, but not limited to member demographics, provider information, charge/payment/allowed information, clinical diagnosis codes, and procedure codes from all adjudicated claims for each billed service. Data suppliers must report medical service paid claims and encounters data for all applicable/covered members. For the purposes of the descriptions in the tables below, the term “claims” means “claims and encounters”. Many descriptions in the tables below refer to “inpatient” claims; please refer to the National Uniform Billing Committee for the definition of “inpatient”. References to the ASC X12N Post Adjudicated Claims Data Reporting Guides (Institutional and Professional) are provided in the tables below.

Pharmacy Claims File (PC)

A pharmacy claims file is a data file composed of service-level claim and remittance information including, but not limited to: member demographics, provider information, charge/payment/allowed information, and national drug codes from all adjudicated prescription drug claims. Data suppliers must provide data for all pharmacy claims for prescriptions that were paid for during the reporting period. References to the National Council for Prescription Drug Programs (NCPDP) Uniform Healthcare Payer Data Standard Implementation Guide Version 27 are provided in the tables below.

Dental Claims File (DC)

A dental claims file is a data file composed of service level claim and remittance information including, but not limited to, member demographics, provider information, charge/payment/allowed information, clinical diagnosis codes, and procedure codes from all adjudicated claims for each billed service. Data suppliers must report dental service paid claims and encounters data for all applicable members. References to the ASC X12N Post Adjudicated Claims Data Reporting Guide (Dental) are provided in the tables below.

Provider File (PV)

A provider file is a data file composed of information including but not limited to: provider identifiers, provider names, specialty codes, and practice locations for all providers included in the Member Eligibility, Medical, Pharmacy, and Dental claim files by the data supplier for the reporting period.

A2—TRAILER RECORD

CDLTR007	Control Total of Paid Amount	int	12	Medical (MC) Pharmacy (PC) and Dental (DC) Claims files only. Provide total paid dollars submitted in the file. Control total for each file (CDLMC125, CDLPC037, CDLDC060), <u>CDLAP016, CDLPR011, CDLCF019</u>). Eligibility and provider file blank. Do not code decimal point or provide any punctuation (e.g., \$1,000.25 converted to 100025).
CDLTR008	Record Count	int	10	Total number of records submitted in the file, excluding header and trailer records.

B. Member Eligibility File (ME)

A member eligibility file is a data file composed of demographic information for each member eligible for medical, pharmacy, and dental benefits for one or more days of coverage at any time during the reporting period. Data suppliers must provide a data set that contains information on every covered plan member, regardless of whether the member utilized services during the reporting period. One record per member, per month, per plan, is required. For example, if a member is covered as a subscriber and a dependent on two different policies during the same month, two records must be submitted. If a member has two contract numbers for two different coverage types, two member eligibility records must be submitted. However, if a member has more than one record due to an address or other change, send only the most current record. References to the ASC X12 270/271 and 834 implementation guides are provided in the tables below.

ABSTRACT: Health Insurance Prospective Payment System (HIPPS) rate codes represent specific sets of patient characteristics (or case-mix groups) on which payment determinations are made under several prospective payment systems. Case-mix groups are developed based on research into utilization patterns among various provider types. For the payment systems that use HIPPS codes, clinical assessment data is the basic input used to determine which case-mix group applies to a particular patient. A standard patient assessment instrument is interpreted by case-mix grouping software algorithms, which assign the case mix group. For payment purposes, at least one HIPPS code is defined to represent each case-mix group. These HIPPS codes are reported on claims to insurers.

ABSTRACT: Provides names, abbreviations, and codes for the 50 states, the District of Columbia, and the outlying areas of the U.S. The ZIP Code is a geographic identifier of areas within the United States and its territories for purposes of expediting mail distribution by the U.S. Postal Service. It is five or nine numeric digits. The ZIP Code structure divides the U.S. into ten large groups of states. The leftmost digit identifies one of these groups. The next two digits identify a smaller geographic area within the large group. The two right-most digits identify a local delivery area. In the 9-digit ZIP Code, the four digits that follow the hyphen further subdivide the delivery area. The two leftmost digits identify a sector which may consist of several large buildings, blocks or groups of streets. The rightmost digits divide the sector into segments such as a street, a block, a floor of a building, or a cluster of mailboxes.
